# *User Story*

---

## *Scenario*

The **Month Selection** categorizes all sneakers based off of the month the shoe will be released. This will allow **users** to navigate through the, “Upcoming Drops” section to the preferred month and shoe they are interested in that will be listed in a **cardview**.

A typical scenario for our **Month Selection** would follow an **algorithm** that will be running behind the scenes for our application. This feature will be the most important part of the application since it will populate the preferences of the **user** and the specific months in which the **user** chooses to purchase sneakers. A user will start at the “**Upcoming Drops**” section and there will be a dropbox which will allow **users** to choose the month in which the user wants to purchase kicks. This algorithm will help **retailers** by receiving data from our input on which months are hottest shoe drops and allow them to make more profit.

It is important as **software developers** to create a **Month Selection algorithm** that is precise with calculating the relationship with the users. Being a software company, our number one priority is to build a trusted relationship between our **users** and **retailers**. We want our **users** to feel as comfortable as possible when using our application.

### **Colours Description:**

Blue: **Objects or Classes of Interest**

Red: **Actors**

Green: **Object Attribute**

Orange: **Irrelevant Objects**

## ***Noun Table***

<b><i>Noun Phrases</i></b>	<b><i>Object</i></b>	<b><i>Attribute</i></b>	<b><i>Actors</i></b>	<b><i>Irrelevant Objects</i></b>
<b><i>Month Selection</i></b>	Core feature of software application			
<b><i>Algorithm</i></b>		Program structure, and pattern that develops the Month Selection tab		
<b><i>Upcoming Drops</i></b>		A featured page that follows the pattern based on user experience and interaction		
<b><i>Users, retailers, software company</i></b>			Actors that are connected to each other to build a platform	
<b><i>Software Developers</i></b>				Intellects that develop and bring together the importance of this application
